Pets are part of the family. Why not feed them like it?

Dried Meats

- Our offerings include dehydrated meat powders, powdered broths, powdered fats, and rendered fats. Our raw materials include chicken, beef, turkey, and fish.
- Using fully cooked dehydrated meat powders as alternatives to fresh or frozen meat simplifies storage, handling and processing while reducing cross-contamination concerns.
- Dried meats also have a more consistent flavor and nutrient profile than fresh or frozen meats.
- Plus, all of our dried meats are **human edible**, this means you are providing the highest quality ingredients that are produced under strict USDA standards.

Egg Products

- Highly efficient and digestible, eggs deliver more protein per gram than meat ingredients, helping formulators reach their nutritional targets.
- Eggs have many of the essential nutrients both humans and pets need to thrive and are proven to support brain, eye, muscle and gestational health
- Using **human edible** ingredients means you are starting with the safest, highest quality product possible.
- In addition to dried eggs, we have an extensive portfolio of fully cooked egg products that are easy to incorporate into fresh pet foods.
